No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This cDNA encodes a human pyrophosphatase (HPYP). HPYP is produced using enertically engineered expression vectors and host cells comprising the generical sequences encoding HPYP. HPYP and agonists, antibodies, contagonists specifically binding HPYP are used in the prevention and antagonists specifically binding HPYP are used in the prevention and contract and inflammatory diseases. Antisense molecules to treatment of cancer and inflammatory diseases. Antisense molecules to polynucleotides encoding HPYP are used for the treatment of diseases polynucleotides encoding HPYP are used for the treatment of diseases polynucleotide with the expression of HPYP. Polynucleotide, fragments, or complement, and antibodies specifically binding HPYP can be used in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1275
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121

                                                                                                                                                                                                            secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX00602) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX06611-X00724; amino acid sequences AAX67807-W68004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 87 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human genes and useful for diagnosis and trodisorders, immune diseases,

The invention relates to 87 novel genes and their fragments (nucleic The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX00611.7x00724; amino acid sequences AAW67807-W68004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides in a sample or by determining the presence of mutations in polypeptides in a sample or by determining the presence of mutations in polypeptides in a sample or by determining the presence of mutations in polynucleotides, based on which tissues they are most highly expressed polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                                         protein as compared to the human protein only. The invention relates to 87 novel genes and the

(A) is also used to isolate full-length genes (for gene therapy and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before they are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AAZ33423-233476 represent expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel nucleic acid sequences (A) that are expressed at high level in prostatic tumor tissue and encode gene products or their fragments. The products of the invention have antitumor activity. Polypeptides (I) encoded by (A) are used: (i) identifying agents for treatment of prostatic cancer and (ii) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1200

CC of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete (C) genes. (B) are used (i) to identify agents suitable for treatment of (C) covarian cancer; (ii) directly for treating this form of cancer (c) including expression from gene therapy vectors) and (iii) for generation (C) fixed antibodies. (A) are identified by assembling ESTS (expressed (C) expression patterns. This allows a significantly longer fragment of the (C) gene to be revealed, so should reduce the number of failures associated (C) with the fact that ESTS from different libraries may represent different (C) parts of the same unknown gene, distorting the estimated frequency of (C) covarian tumor cDNA library derived EST fragments described in the method (C) covarian tumor cDNA library derived EST fragments represented in (C) (C) AAY76505-Y76638.

                                                                                                                                                                    The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence obtaining cDNAs and genomic DNAs that correspond diagnostic, forensic, gene therapy and chromosome

Claim 1; Page 212; New colon tumor polypeptides used to inhibit the development of cancer, especially colon cancer, and for diagnosing and monitoring the 229pp; English

portions of proteins which are associated with human colon tumours. The invention also specifically discloses 8 human colon tumour proteins (AABI1897-B11904). The nucleic acids, the polypeptides they encode, and antigen presenting cells (APCs, preferably dendritic cells) expressing antigen presenting cells (APCs, preferably dendritic cells) expressing such polypeptides may be used in vaccines that target tumour cells, such polypeptides may be used in vaccines that target tumour cells such polypeptides are cancer. T-cells specific for the polypeptide expressed by the APC are cancer. T-cells specific for the polypeptide expressed by the APC are used to remove tumour cells from biological samples, especific for the fractions thereof. The sample or the isolated T-cells specific for the fractions thereof. polypeptide can then be used to inhibit cancer development. CD4+ and/or CD8+ T-cells from a patient may be incubated with a polypeptide or nucleic acid of the invention, or an APC expressing such a polypeptide, to cause the proliferation of specific T-cells. The T-cells can be cloned and then administered back to the patient to inhibit cancer development. Nucleic acids encoding the polypeptides and antibodies against the polypeptides may be used to determine the expression level against the polypeptides may be used to determine the expression level of a tumour protein of the invention, and therefore to determine whether. Sequences AAA77722-A78199 represent 478 cancer cells are present. Such diagnostic methods may also be used to monitor the progression of a cancer by repeating the processes at time intervals, and comparing the current result to previous results. The present sequence represents a cDNA encoding a human colon tumour cDNAs encoding proteins o R

                                                                                                                                                                       activity of TCAPs by expressing inactive proteins or to supplement the activity of TCAPs by expressing inactive proteins, (II) may be used to patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein (II) and its complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and polymerase chain reaction (PCR) and hybridisation assays to detect and polymerase chain reaction for similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may therefore which patients may be in need of restorative therapy. (TCAPs also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-DEC-1999;

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying expression in samples derived from human placenta. The probes are for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          õ
                                                                           3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a CDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for
                                                                                                                                                                                                                                                                                                                           A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo

CC metanoma, myeloma, sarcoma, and tetracarcinoma. Such cancers include, contain, cervix, breast, gall bladder, ganglia, ovary and pancreas. Where cc brain, cervix, breast, gall bladder, ganglia, ovary and pancreas. Where cd decrease the activity of HRGP are administered. Such responses may be cd ssociated with disorders such as Addison's disease, adult respiratory cc distress syndrome, AIDS, allergies, anemia, asthma, atherosclerosis, cc dermatitis, dermatomyositis, diabetes mellitus, emphysema, atrophic cc dermatitis, dermatomyositis, diabetes mellitus, emphysema, atrophic cc diritable bowel syndrome, lupus erythematosus, multiple sclerosis, cc osteoporosis, poncreatitis, polymyositis, rave's disease, hypersinophillia, cc osteoporosis, pancreatitis, polymyositis, rational artitis, crave's disease, hypersinophillia, cc osteoporosis, pancreatitis, polymyositis, rational artitis, cc osteoporosis, pancreatitis, polymyositis, rational artitis, cc osteoporosis, pancreatitis, polymyositis, rationatod artitis, cc complications of cancer, hemodialysis, extracorporeal circulation; viral, cc bacterial, fungal, parastitic, protozoan, and helminthic infections; and cc conditions, and as a source of primers and probes. The invention provides novel human regulatory proteins (AAY28915-926), designated HRGP, and their polynucleotides (AAX89285-296). The proteins can be produced using standard recombinant technology. The expression of HRGP is closely associated with cell proliferation and the polypeptides and polynucleotides are useful in the diagnosis, treatment and prevention of diseases associated with cell proliferation, particularly prevention of diseases associated with cell proliferation, particularly prevention of prevent a cancer. The protein or agonists may be administered to treat or prevent a cancer such as adenocarcinoma, leukemia, lymphoma, mollancems amount of the cancer such as adenocarcinoma, leukemia, lymphoma, mollancems.
